

Vaibhav Kore

📍 Kolhapur, Maharashtra, India

+91-9527896636 | vaibhavkore6636@gmail.com | linkedin.com/in/vaibhavkore6636 | github.com/vaibhav6636

Profile Summary

M.Sc. Statistics graduate with strong skills in data analysis, statistical modeling, machine learning, and data visualization. Proficient in Python, SQL, Excel, Power BI, and exploratory data analysis with hands-on experience in data preprocessing, predictive modeling, and statistical testing. Completed research projects on Credit Card Fraud Detection and Student Performance Analysis using Logistic Regression, Random Forest, and XGBoost. Experienced in applying statistical and machine learning techniques to solve real-world problems and generate data-driven insights.

Education

Vivekanand College, Kolhapur Master of Science in Statistics	July 2024 – Apr 2026 Result Awaited
Doodhasakhar Mahavidyalaya, Bidri Bachelor of Science in Statistics	July 2021 – May 2024 CGPA: 8.58
Doodhasakhar Vidyaniketan & JR College, Bidri Maharashtra State Board HSC (12th), Science Stream	July 2020 – Apr 2021 Percentage: 73.83
Pratibha High School, Maharashtra State Board SSC (10th)	July 2018 – Mar 2019 Percentage: 92.60

Skills

Technical Skills: -

- **Programming Languages:** R, Python, SQL.
- **Data Analysis and Visualization:** Excel, Power BI, Tableau, Pandas, NumPy, Seaborn, Matplotlib, Exploratory Data Analysis (EDA).
- **Statistics:** Hypothesis Testing, Regression Analysis, Correlation, ANOVA, Sampling Techniques, Statistical Modeling.
- **Machine Learning:** Logistic Regression, Random Forest, XGBoost, Classification, Clustering, PCA, Feature Engineering, Model Evaluation.
- **Tools & Frameworks:** Scikit-learn, Jupyter Notebook, VS Code.
- **Soft Skills:** Analytical Thinking, Problem Solving, Teamwork, Time Management, Storytelling with Data.

Work Experience

Data Analytics Intern | Codec Technologies India | Feb 2026 – Mar 2026

- Worked on Customer Churn Prediction and Employee Attrition Analysis projects using Python and machine learning techniques.
- Performed data cleaning, preprocessing, exploratory data analysis (EDA), and visualization on datasets containing 1,000+ records.
- Built and evaluated classification models using Scikit-learn and achieved over 80% prediction accuracy during model evaluation.
- Generated insights from real-world datasets to identify churn and employee attrition patterns for better decision-making.
- Tools Used: Python, Pandas, NumPy, SQL, Excel, Matplotlib, Seaborn, Scikit-learn.

Projects

1. Credit Card Fraud Detection using Statistical & Machine Learning Techniques. | github.com/vaibhav6636/credit-card-fraud-detection-ml

- End-to-End Data Analytics & Machine Learning Project

- Developed an end-to-end fraud detection system using statistical analysis and machine learning on real-world credit card transaction data.
- Performed data preprocessing, feature engineering, and exploratory data analysis to identify fraud patterns.
- Conducted hypothesis testing to study differences in transaction behavior between fraudulent and genuine users.
- Built and evaluated classification models including Logistic Regression, Random Forest, and XGBoost.
- Achieved highest performance using XGBoost with strong fraud detection capability based on ROC-AUC and classification metrics.
- Tools Used: Python, Pandas, Numpy, Matplotlib, Scikit-learn, XGBoost, Excel, Jupyter Notebook.

2. A Study on Student Challenges and Their Impact on Academic Achievement. | github.com/vaibhav6636/student-performance-analysis-project

- Academic Research Project | 2025–26

- Conducted a student survey in English and Marathi to collect academic, personal, and behavioral data from undergraduate students.
- Performed data cleaning, preprocessing, feature engineering, and exploratory data analysis (EDA) using Python, R, and Excel.
- Applied Correlation, Regression, ANOVA, Chi-Square Test, and EFA to analyze factors affecting academic performance.
- Built machine learning models including Logistic Regression, Random Forest, and XGBoost to identify academically at-risk students.
- Evaluated model performance using Accuracy, Precision, Recall, F1-Score, ROC Curve, and AUC metrics.
- Tools Used: Python, R, Pandas, NumPy, Matplotlib, Scikit-learn, XGBoost, Excel, Jupyter Notebook.

Certificates

1. Complete Data Analyst Bootcamp – From Basics to Advanced - Udemy | Sep-2025

Learned the end-to-end data analysis process including data cleaning, visualization, and reporting using Python, SQL, Excel, and Power BI.

2.Data Science Using Python - NPTEL (Swayam) | Jul-Oct 2025

Scored 87% in a 12-week, credit-recommended national program. Proficient in Python for data analysis and machine learning.

3. Power BI Workshop - Office Master | Oct-2025

Gained practical experience in building interactive dashboards, using DAX formulas, and creating business intelligence reports.

4.Tata – GenAI Powered Data Analytics Job Simulation - Forage (Tata IQ Virtual Experience) | Jan 2026

Performed EDA, handled missing data, and analyzed financial risk factors for credit card delinquency prediction.

5. Deloitte Australia – Data Analytics Job Simulation - Forage | Jan 2026

Analyzed business data and created dashboards using Excel and Tableau to generate data-driven insights.

6. SQL Bootcamp Certification - LetsUpgrade | Jan 2026

Worked with SQL queries, joins, filtering, grouping, and relational database operations for data analysis.
